**TODAY, PIETTA IS A SYNONYM FOR THE MOST ACCURATE AND REFINED HISTORICAL FIREARM REPRODUCTIONS, AS WELL AS HIGH-QUALITY GUNS FOR THE MOST PASSIONATE HUNTING ENTHUSIASTS.**

But how much willpower, devotion, ambition, passion, and effort did this family of businessmen need to pave the path that led them to gain the successful position they have today after 50 years in business? We interviewed Giuseppe Pietta, the founder of “F.A.P. Fabbrica Armi Fratelli Pietta.” Born in Gussago in 1938, he is a sturdy man, better at ease in talking about his company than in sharing his private life. He spoke with spontaneity all through the interview as if he didn’t wish to reveal the man behind a great company. But it is apparent that his willpower, constancy and hard work have made, and are still making the difference. Son of a worker at Tempini Industries, the seventh out of nine brothers and sisters, he is still grateful today for what his father gave him: “... he couldn’t afford to let me study, but he gave me a lot more. He passed on sound values of honesty, will and sense of respect toward others which were the model of his and our family’s life, and I grew up carrying the sense of commitment and ambition with me.”

*Cav. Giuseppe Pietta, beloved father*

# “A man with a dream and a family to fulfill it”

A desire to do more to get more began for Giuseppe Pietta at the age of 18, when he refused the assistance offered by the Parson in Gussago, who was ready to help him get a job at O.M., Brescia. This success drove the company to grow more, and soon the brothers felt the need for even more room by expanding to their father's small vineyard. "I've always taken all big decisions by myself," Giuseppe Pietta tells us, "...first I decided, did what I meant, and then I consulted my wife; I used to be more decision maker, she used to be more reflective...we have had arguments, but in the end she has accepted and agreed with what I decided; she knew that everything I was doing was only for our own as well as our children's benefit. "My father gave me much, everything he could, and even more important than what he could afford, he passed on his values, which I seized and, together with my wife, we tried to communicate to our children; he taught me to behave honestly, even if he couldn't have us live with the wealth he desired." "I wanted to give my family the opportunities I did not have. That's why I have been such a hard worker. Never counting the time passing by, not being with my family as much as I wished and dedicating less time to them than I wished, with the purpose to be able to give them more. I know they understood that." At fourteen I started work in a firearm plant in Collebeato; it was just a small factory and I took advantage of the opportunity to learn every step in the shotgun manufacturing process. In the meantime I was attending evening classes studying technology and mechanics. While working I could afford buying books without burdening my family. I still had enough time to dedicate to my other passion, photography. I started shooting some photo reports and, after work, I used to go to a friend's laboratory, and that friend taught me how to develop my photos.

I was a gunsmith by day, and a photographer by night. A short example shows Mr. Pietta's business sense, making decisions in his company's history. "Working for third parties assured we could pay our bills and not risking our assets on loans allowed us to expand even further by hiring apprentices. Some of these earned the fidelity medal of our factory for staying with us for more than forty years." My wife Elisabetta resigned from the previous firm even before getting married, and officially entered the "FratelliPietta." She is still a centerpiece of the firm today. In 1965 the two brothers decided to give new life to the factory through buying shotgun components to assemble directly. The first copy produced was dated April, 1966, and sold the following month for 30,000 Lire. It was "...a.12 gauge over & undershotgun, the first carrying our brand." "In the first year of our production we made 156 of them. During the following year we made more than a thousand. In the same period we started collaborating with an important French firm exporting shotguns for the French market. Our factory sent them their first shotgun in 1967. Since then our cooperation intensified considerably, and our brand began to circulate. Afterwards 'Monsieur Galan' came on visit to our factory thanks to a common connection; he was a French businessman who imported hunting guns for business and was looking for a factory which could produce historical American gun models. The first of his purchase orders included 10,000 guns, the 1851 Navy model. That order completely changed the direction of our factory, heading more towards producing rather than assembling guns. This important decision involved an equally important investment. It was a brave choice. In the meantime in France, the law concerning firearms import was being modified and our first four-hundred-piece supply

got stuck. That was really a terrible moment in our company's life. We had committed ourselves and had to honor our obligations. We succeeded, with great efforts in finding a new customer who bought the stock, even at a lower price than we had expected, but this way we managed to avoid more serious matters, until the French law was reestablished." The biggest turning point in the F.A.P. Fabbrica-ArmiFratelliPietta occurred in 1972, when they start cooperating with a renowned Italian agent working in the field, OrestePuzzo. Significant projects were born from this collaboration, which are still in force today. "Just think of what it meant for us to receive the first purchase order from an American customer asking us to send them seven thousand pieces, when our monthly production was four hundred replicas... we immediately wondered if the order was for real. But it was, and actually required producing not only the 1851 Navy model, but also the Colt Army, the Remington, the 1836 Paterson, and the Le Mat model."

# Pietta's Factory

**"I WAS LOOKING FOR AN INCENTIVE TO DO SOMETHING IMPORTANT,  
BOTH FOR MYSELF AND FOR THE FAMILY I WOULD BUILD IN THE FUTURE"**

The market expanded and the company enlarged, requiring fifteen inside workers. Then, in 1978, due to increased demand, the company faced a drastic decision; they need an inner structural reorganization, requiring a substantial capital investment. The two business-brothers decided to follow different paths and the factory, which kept the same name, stayed under the management of Giuseppe Pietta and his wife Elisabetta. In 1985 they were awarded an important prize by the Houston Chamber of Commerce, another sign of approval for their excellence. The business forecast proved to be correct, the company boomed and the factory was again not large enough; another four hundred square meters were added and finally, in 1995, they moved into the new headquarters, which covers three thousand square meters, and employs thirty workers. In the course of time, once

*Pietta's Factory - Gussago*

they finished their studies, his two sons joined the factory to work with their father. Together they share the same passion, commitment, ambition and great respect for the customer. Today, Alberto Pietta, born in 1968, is responsible for the technical department, while Alessandro, eight years younger, is in charge of trade management. Rosangela, his eldest child and only daughter, has chosen to become a doctor. "It's convenient, you know, to have a doctor as a daughter," Giuseppe tells us, "you feel taken care of, controlled, safer in a certain way. Some time ago I was thinking of retiring, and, I think I would have, if my sons hadn't wished to continue my business. They asked me to go on with them and I'm really glad they did; I'm sincerely happy they chose to carry forward my dream of a lifetime. I shared my life with my wife our family and also my job as she's still working together with me in the factory. At the beginning, when everything started, I didn't know if I would make it, I only knew I would do anything in my power to make it. I had a dream shining in front fulfilled it with my family."

# 1836 PATERSON

## *THE FIRST REVOLVER: THE PATERSON*

Featuring a retractable trigger ejected from the frame when cocking the hammer, a single action mechanism, three basic constructive components

tied up together and a 5 chambers .36 cylinder, the revolver is produced in two different versions: Pietta Paterson Standard and Extra Deluxe.

# 1851 NAVY

## THE STEEL GUNS AND THE CONFEDERATE HANDGUNS

The 1851 Navy model was probably Col. Samuel Colt's favorite. He named it Navy Model, meaning it to be used by the Navy thanks to its small .36. It was instead sold in larger quantities to the Army and became the inseparable companion of the Yankees during the Civil War. The 1851 Navy Yank model was considered as one of the most brilliant single action revolvers thanks to its fast draw and light recoil. Available in the versions "SHERIFF'S Model" with shortened barrel (the favourite gun of Wild Bill Hickok, the legendary sheriff of Abilene), CIVILIAN Model, with silver plated brass backstrap and triggerguard, and the LONDON Model, with steel backstrap and triggerguard, like the ones

produced from 1853 to 1856 in the city it was named after. Far into the war the Confederate Government was forced to appeal to the sense of patriotism of anyone who could contribute in the production of guns. Mr. Griswold answered to this help request. The gun production of the Griswold & Grier was soon stopped by the lack of steel: church bells, sword handles and cannon parts were used. Thus originated the Reb Confederate, with round barrel and red or yellow cast brass frame, brass triggerguard and backstrap of the same color of the frame and, afterwards, the Re Nord Navy with an octagonal barrel. To complete the line we introduced the SHERIFF'S and CARBINE versions.

# 1858 NEW MODELS

## *1858 NEW MODELS AND 1851 U.S. MARSHALL MODELS*

The production of firearms by Remington goes back to 1816, when Eliphalet Remington produced his first gun in Ilion, N.Y. Thanks to the talent of his designer, Mr. Beals, in 1858 he patented and started the production of a revolutionary weapon: the 1858 NEW MODEL ARMY.44. Our range covers various versions: the 1858 NEW MODEL NAVY in .36, the

TARGET version with adjustable front and rear sights in .44 or the nickel plated version available with brass or steel frame. Another version is the STAINLESS STEEL, designed to better stand the wear caused by black powder. For anyone who prefers the long barrel we offer the 1858 BUFFALO .44. The range is completed by the 1858 TEXAS with brass frame .36/.44

## THE RIGHT GUN AT THE WRONG TIME: THE 1858 STARR

The two piece frame was held together by a knurled thumb screw located on the right side of the frame, between recoil shield and hammer. Another innovation was the lack of the cylinder rotation pin. Unfortunately, towards the mid 1863, Mr Starr was forced to turn his genial revolver from double action, the STARR D.A. MODEL 1858 .44 cal., into single action, still in .44 cal. He could then produce an efficient and affordable weapon, the STARR S.A. MODEL 1863 ARMY .44 cal.

# 1860 ARMY

## *ARMY MODELS*

The last models produced by Col. Colt before his death were the 1860 Army Model .44 and the 1861 Navy Model .36, built using the new steel-silver alloy discovered in the Col. Colt's plants. We have introduced various models in our range: PIETTA SHERIFF'S Model, PIETTA 1860 ARMY BRASS FRAME, an inexpensive variation of the original steel frame gun, PIETTA 1861 NAVY, with brass backstrap and triggerguard, PIETTA 1862 NEW YORK METROPOLITAN POLICE .36, the gun which was for many years the ordnance weapon of the N.Y.P.D., with silver plated backstrap and triggerguard, THE PIETTA 1862 POLICE "PONY EXPRESS" .36/.44 with brass frame.

# 1862 DANCE 1862 SPILLER

## *1862 DANCE & 1862 SPILLER*

Navy Yank Texas: The Dance Model

In 1861-1862 the J.H. Dance & Brothers started their revolver production. Probably inspired by the most renowned models at that time, the 1848 Dragoon and the 1851 Navy, they designed the Dance revolver.

The Spiller & Burr model combines the merits of two famous revolvers: the Remington solid frame and the Colt mechanism.

# 1863 POCKET

## 1863 POCKET

Approx. 25,000 pieces were produced in three different versions between 1863 and 1873. The first type featured a brass frame and trigger guard. The second, identical in size and in mechanism to the first, featured a steel frame and a brass trigger guard. The third, and last of the series, was completely made of steel. The Pocket revolver is now available in all versions featuring walnut grips, case-hardened hammer and trigger and blued octagonal barrel. Available also in nickel-plated version and engraved version.

# THE SMITH CARABINE

## *THE SMITH CARABINE*

During the so called period of transition, soon after the end of the Civil War, many weapons were originated and played a more or less important role in the American history. The Smith Carbine was one of those weapons: many pioneers ventured to the West armed with their trustworthy Smiths. The hinged breech action allowed a quick and easy reload even on horseback. The reproduction of the Smith Carbine is available in CAVALRY version .50 with saddle bar ring, ARTILLERY with sling swivels and finely hand engraved.

# LEMAT

## *LEMAT THE NOBLE GUNS*

The most unusual, but certainly well known since the Civil War among all the black powder revolvers, bears the name of Le Mat. This revolver allowed 10 shots (9 shots plus 1 in .65). The .65 central barrel is produced, for market requirements, in .20 for muzzleloaders. Now the LeMat has been perfectly re-created for collectors and historians in the three main models: CAVALRY, with spur triggerguard, lever type barrel release, cross pin barrel selector and a lanyard ring, NAVY with knurled pin barrel release and spur barrel selector, ARMY similar to the Navy Model with cross pin barrel selector. To complete the line we introduced the SHERIFF'S and CARBINE versions.

# CUSTOM GUNS

## *CUSTOM GUNS*

Many of our revolvers are also made in special versions, with different customizable finishes: hand engraved by art masters, with white plastic cheeks, fake ivory, special writings such as dedications or names. These customizations can be applied on all types of revolvers we produce. In the pictures some examples proposed by us.

# 1873 S.A.

## *THE SINGLE ACTION REVOLVERS GREAT WESTERN II*

After a careful study and a massive use of our human resources, this gun, according to some American experts whom it has been submitted to, turns out to be the best and the most suitable one to answer the demands of the modern cowboys: lasting reliability and interchangeability with the old west originals, we produce this gun using the best technologies and the best material available. Every single revolver

is taken care of and checked by skilled personnel. It is available in the three traditional barrel lengths (4 ¾", 5 ½", 7 ½"), in the .45LC, .357Mag and .44/40W calibers, casehardened, nickel plated or stainless steel frame with oil polished European walnut grip or with polymer ivory looking grip. These are some of the features of our 1873 S.A. Revolver.

# ***CHALLENGE COLLECTION***

***RIFLES 100% MADE IN ITALY***

FAP F.lli Pietta was the first company to put brand “100% made in Italy” on its weapons-an important insight, immediately imitated by many. Since then, targeted choices have followed to secure precise niches of the shotgun market as well. Clearly winning choices, since, today, the sale of shotguns constitutes about 8% of global sales.
